

BIOF4001 Oral Presentation Rubric

<i>Achievement Level</i>	<i>Quality of the Presentation Slides</i>	<i>Oral Communication of Ideas</i>	<i>Depth of Understanding of the Research Topic</i>	<i>Academic Merits of Data and Methodology</i>	<i>Ability to Respond to Questions</i>
10 (Outstanding)	Slides are clear and appropriate in number and content, elegantly delivering the key message.	The information is clearly communicated and presented in a logical manner, with appropriate use of tone and pace.	A comprehensive understanding of the background of the topic and motivation of proposed research is evident from the presentation.	Shows an exceptional ability to describe the data, limitations and analytical methods.	Understands and responds to all questions knowledgeably, showing a clear appreciation of the context of the study in relation to existing knowledge. Expresses ideas confidently using effective communication.
8-9 (Good to Excellent)	Slides are generally clear and appropriate, effectively delivering the key message.	The information is conveyed well, in a way that makes the ideas easy to follow.	A good general level of understanding of the topic and motivation of proposed research is evident from the presentation, with some minor misunderstandings.	Shows good ability to describe the data, limitations and analytical methods..	Understands and responds to most questions knowledgeably. Able to put the study into context and to express ideas clearly.
6-7 (Satisfactory)	Slides are reasonable, though sometimes inappropriate in their content or number, reducing the effectiveness of the presentation.	Adequate communication, though at times hard to follow, due to unclear pronunciation, inappropriate tone or pace.	An adequate understanding of the topic and motivation of proposed research is evident from the presentation, with some misunderstandings or factual errors.	Shows a reasonable ability to describe the data, limitations and analytical methods.	Responds to some questions, showing reasonable background knowledge, but does not always express ideas or information well.
4-5 (Poor)	Major deficiencies are found in content of many slides. The number of slides is inappropriate. Effectiveness of the presentation is severely affected.	The ideas are not easy to comprehend for much of the presentation.	A superficial understanding of the topic and motivation of the proposed research is evident from the presentation.	Major deficiencies are seen in the understanding of the data, limitations and methods.	Struggles to answer questions, both in terms of knowledge and oral expression.
<4 (Fail)	Slides are mostly inappropriate in content and number, making the presentation ineffective.	The presentation is incomprehensible.	No understanding of the topic and proposed research is evident from the presentation.	No ability to describe the data, limitations and methodology.	Unable to respond to questions or express ideas.
0	NO presentation given				

BIOF4001 Dissertation Rubric

<i>Achievement Level</i>	Overall Presentation	Explanation of Research Question	Methods	Results	Data Analysis	Overall Quality of Writing	Scientific Reasoning and Intellectual Merits
10 (Outstanding)	The dissertation is clearly structured and neither overly short nor excessively long. It contains an introduction, a conclusion, an abstract#, a table of contents, as well as annotated diagrams, figures and tables where appropriate.	The research question is well defined and argued in relation to the literature. Rationale, novelty and importance of the study are well explained.	Suitable analytical (and experimental) methods are used and well described with sufficient technical details for the reproduction of the work.	A substantial amount of novel and well-supported results is generated and presented.	A sophisticated analysis is presented, accompanied by a thorough discussion of the findings <u>and</u> methods. Results are discussed in relation to the research question. Limitations and future directions are identified.	A scholarly piece of writing of excellent clarity and readability. Free of typographical or grammatical errors.	The dissertation demonstrates a deep understanding of the topic as well as excellent ability in critical thinking and scientific reasoning. Significant novel insight is provided. Free of scientific or factual errors. Publishable as a research article or report in mainstream international journals.
8-9 (Good to Excellent)	The dissertation is deficient in one of the key areas identified above.	The research question is clearly defined with some explanation of rationale, novelty and importance.	Suitable methods are used and described with a few omissions.	Multiple lines of results are presented with a few omissions.	A competent analysis is presented. Issues on methods, key findings, limitations and future directions are discussed in relation to the research question.	A scholarly piece of writing with good clarity. Minimal typographical or grammatical errors.	The dissertation demonstrates insight, independent thinking, and a good understanding of the topic. Minimal scientific or factual errors.
6-7 (Satisfactory)	The dissertation is deficient in two or three of the key areas identified above.	The research question is stated with some deficiencies in explaining the rationale, novelty and importance.	Some suitable methods are used and described with some deficiencies.	Some results are presented with some deficiencies.	A reasonable analysis and discussion of the data. Some relevant issues are overlooked.	Some deficiencies in writing clarity. Some typographical or grammatical errors.	Some insight into the topic and a good general understanding. Some scientific or factual errors.
4-5 (Poor)	The dissertation is deficient in more than three key areas identified above.	The research question is not clearly defined or explained.	Methods are poorly described.	Major deficiencies in results and presentation.	A simplistic analysis of the data. Results are discussed superficially in relation to the research question.	Major deficiencies in writing clarity. Many typos and errors.	Little evidence of insight into the topic, but there is evidence of a reasonable level of understanding of the area. Some scientific or factual errors.
<4 (Fail)	The dissertation lacks any structure and formal organisation.	There is no research question stated in the introduction.	No description of research methods.	No data collection or presentation.	The essay lacks analysis or discussion in relation to the research question.	The dissertation is not clearly written and is full of errors.	The dissertation shows no evidence of insight into the topic. Understanding of the subject is superficial or minimal.
0	NO dissertation submitted						

Abstract should outline the scope of the dissertation, summarise its context and key findings, and highlight unresolved questions within 300 words.

BIOF4001 Viva Voce

<i>Achievement Level</i>	<i>Ability to Respond to Questions</i>	<i>Depth of Understanding of the Research Topic</i>	<i>Academic Merits of Data and Methodology</i>	<i>Problem-Solving and Technical Proficiency</i>	<i>Critical Thinking and Reflection</i>
10 (Outstanding)	Understands and responds to all questions knowledgeably, showing a clear appreciation of the context of the study in relation to existing knowledge. Expresses ideas confidently using effective communication.	A comprehensive understanding of the background of the topic is evident from the viva.	Shows an exceptional ability to describe the data, limitations and analytical methods.	Demonstrates excellent understanding of analytical tools; articulates troubleshooting and error-handling strategies confidently.	Critically analyses research limitations and proposes realistic improvements.
8-9 (Good to Excellent)	Understands and responds to most questions knowledgeably. Able to put the study into context and to express ideas clearly.	A good general level of understanding of the topic is evident from the viva, with some minor misunderstandings.	Shows good ability to describe the data, limitations and analytical methods..	Shows solid tool proficiency with some technical insight.	Identifies some limitations and demonstrates reflective thinking.
6-7 (Satisfactory)	Responds to some questions, showing reasonable background knowledge, but does not always express ideas or information well.	An adequate understanding of the topic is evident from the viva, with some misunderstandings or factual errors.	Shows a reasonable ability to describe the data, limitations and analytical methods.	Basic familiarity with tools; limited ability to address technical challenges.	Acknowledges limitations superficially.
4-5 (Poor)	Struggles to answer questions, both in terms of knowledge and oral expression.	A superficial understanding of the topic and motivation of the proposed research is evident from the viva.	Major deficiencies are seen in the understanding of the data, limitations and methods.	Minimal tool understanding or inability to explain computational steps.	Limited awareness of limitations or broader implications.
<4 (Fail)	Unable to respond to questions or express ideas.	No understanding of the topic and proposed research is evident from the viva.	No ability to describe the data, limitations and methodology.	No understanding of computational steps in the project.	No awareness of limitations or broader implications.
0	NO viva voce taken place				

BIOF4001 Code repository

<i>Achievement Level</i>	<i>Code Quality and Functionality</i>	<i>Documentation and Readability</i>	<i>Version Control Usage</i>
10 (Outstanding)	Code is well-structured, efficient, and modular with appropriate use of functions and files.	Excellent comprehensive README; well-commented, consistent style, easy to understand.	Commits are frequent, well-described, logically grouped.
8-9 (Good to Excellent)	Code mostly well-structured with minor inefficiencies or small issues.	Good README with minor missing details; adequate comments and style.	Some commits throughout the project which are mostly descriptive and logical.
6-7 (Satisfactory)	Code is functional but has several inefficiencies or unclear organisation.	Basic README and comments; some parts unclear or undocumented.	A few or a single commit. with limited descriptions.
4-5 (Poor)	The code has missing components and has multiple deficiencies in organisation.	Poor or missing documentation and comments; hard to follow.	A single commit with no meaningful description.
<4 (Fail)	The code is incomplete, poorly written and organised.	Minimal or no documentation and comments.	No commits.
0	NO code repository		

BIOF4001 Continuous Assessment Rubric

<i>Achievement Level</i>	Interaction with Supervisor and the Research Group	Understanding of Research Topic, Technical Competence and Reliability	Learning Attitude and Motivation	Commitment and Time Management	Critical Thinking, Creativity and Intellectual Merits	Overall Performance and Overall Technical Quality of Research Work
10 (Outstanding)	Participates actively in regular meetings with supervisor and group meetings. Excellent communication and interpersonal skills. Excellent social adaptability and team spirit. Actively seeks help from others. Continually develops new ideas and revises work in response to feedback.	A comprehensive understanding of the principle and experimental or analytical aspects of the topic. Excellent technical capability and reliability.	Fully engaged in an active learning and enquiry process. Highly self-motivated.	Shows continual dedication to developing research skills and collecting or analysing data. Excellent time management throughout the project.	Demonstrates excellent ability in critical thinking and scientific reasoning. Good creativity in research design or execution.	Superb performance. Excellent technical quality of research work.
8-9 (Good to Excellent)	Good to excellent interaction with supervisor and the research group. Improvement is needed in one major area listed above.	A good general level of understanding of the topic with some minor misunderstandings. Good technical capability and reliability.	Strong evidence for active learning attitude and self-motivation.	Shows good commitment to developing research skills and collecting or analysing data. Able to manage time effectively.	Demonstrates good ability to think critically. Shows some creativity in research design or execution.	Good performance. Good technical quality of research work.
6-7 (Satisfactory)	Some active interaction with supervisor and the research group. Substantial improvement is required in at least two major areas listed above.	An adequate understanding of the topic with some misunderstandings or factual errors. Several lines of evidence for technical capability and reliability.	Some evidence for active learning attitude and self-motivation.	Spends a reasonable amount of time developing new skills and collecting or analysing data. Shows adequate time management.	Aware of intellectual weaknesses and strives to improve. Has at least one new idea in research design and execution.	Satisfactory performance. Acceptable technical quality of research work.
4-5 (Poor)	Interaction with supervisor and the research group is very passive. Does not engage in dialogue and makes only a minimal effort to follow up with issues raised by the supervisor.	A superficial understanding of the topic. Technical capability and reliability remain to be enhanced.	Weak evidence for active learning attitude and self-motivation.	Sporadic commitment during the project. Meets deadlines, but long-term time management is poor.	Makes an effort to think critically and to be creative.	Poor overall performance and poor technical quality of research work.
<4 (Fail)	Does not attend meeting or comes completely unprepared. No evidence for interaction with supervisor and the research group.	No understanding of the topic. Evidence for technical capability or reliability remains to be seen.	No evidence for active learning attitude or self-motivation.	Spends insufficient time learning new techniques, collecting or analysing data. Time is not well managed.	Critical thinking, creativity or intellectual merits cannot be seen.	Overall performance is below the standard. Research work is technically flawed.
